

Jinno Lighting

### Product Description:

JN-757

The U-Shaped Aluminum Channel System has a professional finish and a contemporary aesthetic that may be used for a variety of LED strip lighting projects.

- The milky white channel cover diffuses the harsh brightness of the LED lights, while the aluminum channel homes and protects your LED strips from dust and physical touch.
- The cover lessens the spottiness of LED strip lights, resulting in a more uniform light. LED strip lights adhesive backing only allows for one installation before losing its stickiness, encasing them in aluminum tubes makes them instantly movable.

You'll never have to waste another LED strip light to find that exact area to illuminate

### Product Specification:

<b>PRODUCT NUMBER</b>	<b>JN-757</b>
