LENS TYPES EXPLAINED

SELECTING THE BEST DISTRIBUTION TYPE FOR YOUR OUTDOOR PROJECT

“Distribution Type” defines how far forward of the luminaire (i.e., on the StreetSide) the effective output reaches.

Type 2 is still linear but wider in the front to accommodate 4 lane roadways, or wider drive lanes.

Type 3 (commonly known as a “Bat-Wing”) is suitable for perimeters, often where other interior pole placements fill the site

Type 4 (commonly known as a “Forward Throw” or Asymmetric) is best along perimeters where spill light is a concern or there are no place to add poles within a site.

Type 5 – is available in a round or square pattern. Best suited for interior areas within a site or on the median of 4-6 lane roadways.
